SUBJECT: New Watts BD1156 and BD911 Dial Set Boiler Fill Valves

Official Communication 237

Ladies and Gentlemen:

I am pleased to announce our new bronze dial set boiler fill valve, offered as both a stand-alone valve (BD1156) and a combination fill valve and backflow preventer (BD911).

With a push-button fast fill and easy-to-read adjustable dial, these valves are easy to use, and the high-capacity fill rate (greater than two times the competition) will save contractors valuable time and money on every job. The 25 psi Autostop feature means installers never have to worry about over pressurizing the system and popping the relief valve.

Both valves come with multiple connections – union solder, union thread, and threaded – and are the same lay length as our current B1156 and B911, making them a perfect replacement choice.

Model	Ordering Code	Description	List Price
1/2 BD1156F *	0386467	Thread In Dial Set Fill Valve	107.00
1/2 SBD1156F	0386418	Union Solder Dial Set Fill Valve	115.00
